Experience

Scapia, Bangalore

Software Developer Jul 2025 – Apr 2026

- Designed and developed an asynchronous card issuance workflow using bank technical service provider (TSP) APIs, implementing a wrapper layer with synchronization logic to ensure consistency across internal and external systems, integrated into an existing multi-bank card issuance platform.
- Built an observability pipeline using EFK and Grafana on GCP, provisioning infrastructure (Elasticsearch, ingress, Kubernetes resources) via Terraform and deploying with Helm; isolated logging workloads on a separate node pool within the cluster, enabling centralized logging, metrics, and alerting for real-time monitoring and faster debugging.

Technical Skills: Java, Spring , AWS, GCP, Terraform, helm, Kubernetees.

Xalts, Bangalore

Senior Software Developer Mar 2025 – Jul 2025

- Developed an AI-powered Document Extraction Node for an n8n-based engine, utilizing LLMs to automate structured data extraction from complex PDFs and financial receipts.
- Engineered a Semantic Mapping Engine that resolved field-name ambiguity across 1000+ unstructured attributes, using domain-specific templates to achieve high extraction accuracy.
- Design and developed Sparc, a unified trade finance platform abstracting multi-bank integrations, by architecting a multi-tenant system supporting both SaaS and self-hosted deployments for enterprise clients.

Technical Skills: Java, Node.js, AWS (Bedrock, Lambda, EC2), GenAI (LLMs), Vector Embeddings, Semantic Search

Software Developer Oct 2023 – Feb 2025

- Designed and implemented a token management system handling user onboarding, permissioning, and transaction authorization across Web2 and Web3 workflows..
- Built a workflow scheduling service for an n8n-like platform, enabling users to schedule and trigger workflows via API based on configurable recurrence rules (daily/weekly/monthly).
- Implemented a cron-based execution engine that polls scheduled jobs from the database and triggers workflows, supporting automated and recurring task execution.
- Reduced GET workflow execution API latency by 40% by eliminating sequential database calls, restructuring queries to fetch node data efficiently across multiple tables using indexing and query parallelization.

Technical Skills: Java, Node.js, AWS (Bedrock, Lambda, EC2), GenAI (LLMs), Vector Embeddings, Semantic Search

Slice, Bangalore

Software Developer Jul 2022 – Jul 2023

- Integrated physical card booking with an additional Delivery Partner (India Post), resulting in a 6% increase in the physical card success delivery rate.
- Migrated legacy Node.js codebase to NestJS.
- Implemented Kafka-based retry mechanisms, in the physical card delivery workflow.

Technical Skills: Node.js, JavaScript, MySQL, MongoDB, Kafka, AWS

Software Developer Intern Jan 2022 – Jun 2022

- Built scalable APIs using Node.js and MongoDB.
- Implemented AWS Step Functions for async workflows.

Publications

PCIL-IDS Jan 2020 – May 2020

Partial Consensus and Incremental Learning-Based Intrusion Detection System.
Lightweight intrusion detection system using incremental learning and consensus algorithms.

Education

Indian Institute of Information Technology, Allahabad 2017 – 2022
Integrated B.Tech + M.Tech (Artificial Intelligence) CGPA: 8.41

Achievements & Awards

PCIL-IDS Paper accepted at International Conference on Cybernetics, Cognition and Machine Learning.

Safe route navigation app funded under NewGen IEDC, ranked 3rd in college.

Codeforces Round 685 Div2 rank: 835.
