Experience

Scapia, Bangalore

Software Developer Jul 2025 – Apr 2026

- Expanded multi-bank card issuance, recovering 7% of primary-bank-rejected applicants by integrating Bank of Baroda's asynchronous TSP APIs and engineering a synchronization layer to reconcile card issuance states across internal and external banking systems.
- Implemented centralized EFK logging and Grafana observability on GKE to simplify production debugging; provisioned infrastructure with Terraform and Helm and isolated logging workloads on a dedicated node pool.

Technical Skills: Java, Spring , GCP, Terraform, Helm, Kubernetees.

Xalts, Bangalore

Senior Software Developer Mar 2025 – Jul 2025

- Enabled enterprise trade-finance operations across 2 banks by architecting SPARC for 10+ enterprise clients, a multi-bank orchestration platform with reusable bank connectors, secure credential management, and SaaS/self-hosted deployment support.
- Enabled enterprise clients to integrate their existing key management providers, including AWS KMS, for secure encryption and decryption through a configurable key management service.
- Engineered an idempotent asynchronous reconciliation engine across corporate VPCs and central SaaS, utilizing local sliding-window leases (60s TTL) and dual-trigger billing sync (organic piggybacking + mTLS heartbeats) to eliminate ERP quota deadlocks and enforce active capacity licensing without distributed locks.

Technical Skills: Java,Javascript, AWS (KMS), Azure key vault, mtls

Software Developer Oct 2023 – Mar 2025

- Enabled customers to schedule 1K+ recurring workflows by developing a database-backed scheduling service with API-configurable daily, weekly, and monthly recurrence and cron-based execution.
- Reduced workflow execution API latency by 40% by eliminating sequential database calls, optimizing multi-table data retrieval through indexing and query restructuring, and parallelizing independent queries.

Technical Skills: Javascript, Node.js, MongoDB, AWS

Slice, Bangalore

Software Developer Jul 2022 – Jul 2023

- Improved physical-card delivery success rate by 6% by integrating India Post as an additional delivery partner, expanding card fulfillment capabilities.
- Improved backend maintainability by migrating legacy Node.js code to NestJS, introducing a modular application structure.
- Improved card delivery workflow reliability by implementing Queue-based retry mechanisms for failed fulfillment operations.

Technical Skills: Node.js, JavaScript, MySQL, MongoDB, Kafka, AWS

Publications

PCIL-IDS Jan 2020 – May 2020

Partial Consensus and Incremental Learning-Based Intrusion Detection System.
Lightweight intrusion detection system using incremental learning and consensus algorithms.

Education

Indian Institute of Information Technology, Allahabad 2017 – 2022
Integrated B.Tech + M.Tech (Artificial Intelligence) CGPA: 8.41

Achievements & Awards

PCIL-IDS Paper accepted at International Conference on Cybernetics, Cognition and Machine Learning.

Safe route navigation app funded under NewGen IEDC, ranked 3rd in college.

Codeforces Round 685 Div2 rank: 835.
